Suppose there are three cards: 1, 2 and 3.

Ann is dealt one of the cards, one of the cards is placed face down on the table and the third card is put back in the deck.

イロト 不得 トイヨト イヨト ニヨー

Suppose there are three cards: 1, 2 and 3.

Ann is dealt one of the cards, one of the cards is placed face down on the table and the third card is put back in the deck.

What are the relevant states?

イロト イポト イヨト イヨト

Suppose there are three cards: 1, 2 and 3.

Ann is dealt one of the cards, one of the cards is placed face down on the table and the third card is put back in the deck.

What are the relevant states?

Suppose there are three cards: 1, 2 and 3.

Ann is dealt one of the cards, one of the cards is placed face down on the table and the third card is put back in the deck.

Ann receives card 3 and card 1 is put on the table

Suppose there are three cards: 1, 2 and 3.

Ann is dealt one of the cards, one of the cards is placed face down on the table and the third card is put back in the deck.

What information does Ann have?

Suppose there are three cards: 1, 2 and 3.

Ann is dealt one of the cards, one of the cards is placed face down on the table and the third card is put back in the deck.

What information does Ann have?

Suppose there are three cards: 1, 2 and 3.

Ann is dealt one of the cards, one of the cards is placed face down on the table and the third card is put back in the deck.

What information does Ann have?

< □ > < 同 >

< ∃⇒

< ∃ >

э

Suppose there are three cards: 1, 2 and 3.

Ann is dealt one of the cards, one of the cards is placed face down on the table and the third card is put back in the deck.

Suppose H_i is intended to mean "Ann has card *i*"

 T_i is intended to mean "card *i* is on the table"

Eg.,
$$V(H_1) = \{w_1, w_2\}$$

< □ > < 同 >

(3)

Suppose there are three cards: 1, 2 and 3.

Ann is dealt one of the cards, one of the cards is placed face down on the table and the third card is put back in the deck.

Suppose H_i is intended to mean "Ann has card *i*"

 T_i is intended to mean "card *i* is on the table"

Eg.,
$$V(H_1) = \{w_1, w_2\}$$

< 同 ▶

∃ ► < ∃ ►</p>

Suppose there are three cards: 1, 2 and 3.

Ann is dealt one of the cards. one of the cards is placed face down on the table and the third card is put back in the deck.

< □ > < 同 >

.⊒ → - ⇒ →

Suppose there are three cards: 1, 2 and 3.

Ann is dealt one of the cards, one of the cards is placed face down on the table and the third card is put back in the deck.

Suppose that Ann receives card 1 and card 2 is on the table.

э.

Suppose there are three cards: 1, 2 and 3.

Ann is dealt one of the cards, one of the cards is placed face down on the table and the third card is put back in the deck.

Suppose that Ann receives card 1 and card 2 is on the table.

Suppose there are three cards: 1, 2 and 3.

Ann is dealt one of the cards, one of the cards is placed face down on the table and the third card is put back in the deck.

 $\mathcal{M}, \textit{w}_1 \models \textit{KH}_1$

Suppose there are three cards: 1, 2 and 3.

Ann is dealt one of the cards, one of the cards is placed face down on the table and the third card is put back in the deck.

 $\mathcal{M}, w_1 \models K H_1$

Suppose there are three cards: 1, 2 and 3.

Ann is dealt one of the cards, one of the cards is placed face down on the table and the third card is put back in the deck.

 $\mathcal{M}, w_1 \models K H_1$

 $\mathcal{M}, w_1 \models K \neg T_1$

Suppose there are three cards: 1, 2 and 3.

Ann is dealt one of the cards, one of the cards is placed face down on the table and the third card is put back in the deck.

 $\mathcal{M}, w_1 \models LT_2$

Suppose there are three cards: 1, 2 and 3.

Ann is dealt one of the cards, one of the cards is placed face down on the table and the third card is put back in the deck.

$$\mathcal{M}, w_1 \models K(T_2 \lor T_3)$$

Should we make additional assumptions about R (i.e., reflexive, transitive, etc.)?

▲口▶ ▲御▶ ▲注▶ ▲注▶ → 注 - のへで

Should we make additional assumptions about R (i.e., reflexive, transitive, etc.)?

For two states w and v, say wRv provided "w and v are indistinguishable according to Ann's information". What properties should R satisfy?

▲ロト ▲御 ト ▲ 臣 ト ▲ 臣 ト ● ○ ○ ○ ○ ○

Should we make additional assumptions about R (i.e., reflexive, transitive, etc.)?

For two states w and v, say wRv provided "w and v are indistinguishable according to Ann's information". What properties should R satisfy?

What idealizations have we made?

Multiagent Epistemic Logic Many of the examples we are interested in involve more than one agent!

▲ロト ▲御 ト ▲ 臣 ト ▲ 臣 ト ● のへで

Multiagent Epistemic Logic Many of the examples we are interested in involve more than one agent!

 $K_A P$ means "Ann knows P" $K_B P$ means "Bob knows P"

▲ロト ▲御 ト ▲ 臣 ト ▲ 臣 ト ● のへで
Multiagent Epistemic Logic Many of the examples we are interested in involve more than one agent!

 $K_A P$ means "Ann knows P" $K_B P$ means "Bob knows P"

- ► K_AK_BP: "Ann knows that Bob knows P"
- ► $K_A(K_BP \lor K_B \neg P)$: "Ann knows that Bob knows whether P
- ¬K_BK_AK_B(P): "Bob does not know that Ann knows that Bob knows that P"

Suppose there are three cards: 1, 2 and 3.

Ann is dealt one of the cards, one of the cards is placed face down on the table and the third card is put back in the deck.

Suppose that Ann receives card 1 and card 2 is on the table.

Suppose there are three cards: 1, 2 and 3.

Ann is dealt one of the cards, Bob is given one of the cards and the third card is put back in the deck.

Suppose there are three cards: 1, 2 and 3.

Ann is dealt one of the cards, Bob is given one of the cards and the third card is put back in the deck.

Suppose there are three cards: 1, 2 and 3.

Ann is dealt one of the cards, Bob is given one of the cards and the third card is put back in the deck.

Suppose there are three cards: 1, 2 and 3.

Ann is dealt one of the cards, Bob is given one of the cards and the third card is put back in the deck.

$$w_1 \models K_B(K_A A_1 \vee K_A \neg A_1)$$

Suppose there are three cards: 1, 2 and 3.

Ann is dealt one of the cards, Bob is given one of the cards and the third card is put back in the deck.

$$w_1 \models \mathsf{K}_{\mathsf{B}}(\mathsf{K}_{\mathsf{A}}\mathsf{A}_1 \lor \mathsf{K}_{\mathsf{A}} \neg \mathsf{A}_1)$$

Suppose there are three cards: 1, 2 and 3.

Ann is dealt one of the cards, Bob is given one of the cards and the third card is put back in the deck.

Suppose that Ann receives card 1 and Bob receives card 2.

 $w_1 \models K_B(K_A A_1 \vee K_A \neg A_1)$

Two issues

Suppose we want to be completely formal in our solution to the muddy children puzzle, what is Epistemic Logic missing?

- 1. Group knowledge (all the children know there is at least one muddy child, they all know this fact, they all know that they know this fact, etc.).
- 2. Public announcements (various statements are publicly announced in the course of the puzzle).

Group Knowledge K_AP : "Ann knows that P"

Group Knowledge K_AP : "Ann knows that P"

 K_BP : "Bob knows that P"

▲口▶ ▲御▶ ▲注▶ ▲注▶ → 注 - のへで

Group Knowledge K_AP : "Ann knows that P"

Something to Think About

 Suppose Ann and Bob both know that two numbers n and n+1 will be chosen and placed on their foreheads. They will be able to see the other player's number, but not their own. Say 3 is written on Ann's forehead and 4 is written on Bob's forehead. Draw a Kripke structure that represents this situation (it is infinite). Is it common knowledge that the numbers are less than 1000? What happens if the agents start (truthfully) announcing "I don't know my number."?

Something to Think About

- Suppose Ann and Bob both know that two numbers n and n+1 will be chosen and placed on their foreheads. They will be able to see the other player's number, but not their own. Say 3 is written on Ann's forehead and 4 is written on Bob's forehead. Draw a Kripke structure that represents this situation (it is infinite). Is it common knowledge that the numbers are less than 1000? What happens if the agents start (truthfully) announcing "I don't know my number."?
- 2. Russian Cards Problem: From a deck of seven cards Ann and Bob each receive three cards and Charles the remaining card. How can Ann and Bob openly inform each other about their cards, without informing Charles who holds which card?
